1. Introduction

Growing demand for user-friendly mobile solutions

Mobility is key in today's business market. Smartphones and tablets are being used for a wealth of tasks, especially now that hybrid working is common practice. Mobile devices allow tasks to be executed more flexible, faster and more efficient. To achieve this, businesses do not always require the most extensive device specifications. Because of this, the demand for allround business tablets is growing.

An accessible allrounder for business use

Samsung answers the demand for accessible business tablets with the Galaxy Tab A line. This line combines decent specifications with accessibility. The Galaxy Tab A8 is another strong example of this. This user-friendly tablet offers options that will appeal to a large group of users. This enables many types of organizations to apply mobility in their services in a convenient manner.

Difference with the Galaxy Tab A7 and S7

The Galaxy Tab A8 is the successor to the Galaxy Tab A7. Compared to its predecessor, the Galaxy Tab A8 has a faster processor and a larger display. The Galaxy Tab A8 will also be available in models with more RAM and internal storage capacity as compared to the Galaxy Tab A7.

For organizations that require the best specs, the Galaxy Tab S line is still the best choice. For example, the Galaxy Tab S7 and S7+ offer a faster processor, more RAM, a larger display and a stronger battery. This makes Galaxy Tab S tablets powerful devices for work environments in which future-proof functionality is required.

One supplier for all things mobile

Samsung offers organizations a complete mobile portfolio. This portfolio consists of smart hardware, management solutions such as Samsung Knox and support services. It provides them with everything they need to set up their mobile environment based on one supplier. This results in simplified device management and ease of use for both organization and employee.

2. Business mobility made easy

Enhanced productivity and accessibility

The very portable Galaxy Tab A8 allows colleagues to work productively and accessible throughout the day. Its decent processor and strong battery make it possible to use apps extensively for hours without interruption. Samsung Knox also offers the right tools to further improve usability and security. This contributes to the service life of the devices, further enhancing productivity and accessibility.

Good multitasking options for everyone

Being able to multitask quickly contributes to the ease of use of devices. The Galaxy Tab A8 also offers a lot of advantage here. Multi-Active Window makes it possible to work with three apps at the same time in split-screen. The Galaxy Tab A8 also offers support for Link to Windows. This tool displays the phone screen on laptops and desktop PCs. Data can be easily dragged from one device to another. Also, shortcuts to smartphone apps can be placed on the desktop of the laptop or PC. In addition, it is possible to use multiple apps in different windows at the same time. That makes multitasking even easier.

Productive anywhere with the right business apps

Business apps like Office365, OneDrive, and Microsoft Teams make it easy to be productive and reachable from anywhere. It enables colleagues to collaborate and communicate with each other from anywhere. The Galaxy Tab A8 offers the right specifications to work well with these apps.

Thanks to the good hardware, working with these apps on the tablet for a long time is no problem. Also, content from the internet browser and Samsung Notes can be effortlessly shared with other Galaxy devices, such as the smartphone. As a result, work is faster and more efficient.

3. Security

The importance of good security

Like smartphones, tablets often contain sensitive data. This data should only be accessible to authorized persons in order to prevent data leaks. That is why the Galaxy Tab A8 is equipped with face recognition. This provides security based on biometric features. Data in apps and internal storage can only be accessed by authorized device users, which contributes to data security.

Good protection by Samsung Knox

Like all Galaxy devices, the Galaxy Tab A8 is equipped with the built-in Knox Platform. This solution protects hardware and software against threats such as malware and hacks. Additional security options are available via Samsung Knox. An example is the kiosk mode; this device mode limits the usage possibilities. Via this mode, tablets can only be deployed for specific tasks. This further contributes to responsible and safe device use.

4. Useful business features

Samsung One UI

Samsung One UI is an interface for the Android operating system which makes operating large displays easier. For example, it is possible to personalize the home screen. This enhances the ease of use, allowing colleagues to work faster. Samsung One UI also provides support for the Screen Recorder functionality. This option allows users to record videos and highlight content on the screen at the same time. This is a useful application for remote presentations.

Collaboration with other Galaxy products

Productivity is further increased when devices in the workplace work together seamlessly. Galaxy devices make this easy, as they are part of the same ecosystem. For example, it is possible to switch between a smartphone and the Galaxy Tab A8; opened Internet pages and Samsung Notes can be viewed quickly on a larger screen.

The Galaxy Tab A8 also features Auto Sync. With this option, bluetooth earbuds that are paired with the smartphone also automatically work on the Galaxy Tab A8. With the Auto Switch function, sound is played on the device being used. Another option is Auto Hotspot. This allows the internet connection of the smartphone to be used via the tablet. This option is useful for working on the go when no other internet connection is available.

5. Specifications

Galaxy Tab A8

Display:	10,5-inch WUXGA-display (1920 x 1200)
Processor:	Dual 2.0 GHz + Hexa 2.0 GHz, UniSOC T618
